BLOCK 1 -CLUSTER A OHT BASE SLAB SHUTTERING WORK IN PROGRESS

A wide-angle photograph of a construction site under a clear blue sky. In the center, a large rectangular structure is being built, its top surface covered with a dense grid of vertical steel reinforcement bars (rebar) protruding upwards. The structure is supported by a network of wooden and metal scaffolding. To the right, another similar but smaller structure is visible, also with rebar protruding. In the background, a hazy landscape with some distant buildings and trees can be seen. The overall scene depicts the active phase of concrete slab preparation.
